

FileCopier Quick Start Guide

FileCopier lets you copy files selectively with fine-grained filters, then apply the result to a destination folder, one or more targets at once, or export a report.

****1. Choose a source folder****

Click *Source → Browse...*, pick the root folder to scan, then click ****Load tree****. FileCopier reads the folder structure (no files are copied yet).

Main window: source tree loaded with the fantasy 'Proyecto 2024' folder structure

****2. Filter what to copy****

Click ****Filter**** to open the filter dialog. Build rules (by name, extension, size, date, path). Free edition allows up to 2 rules; Pro removes the limit. Click ****Apply**** — matching files are listed in the *Preview*.

☒ Filter active

Logic: ☒ AND ☐ OR

☒	Name	contains	factura	☐ ScanAll	X
☒	Size	greater than	1048576	B	☐ ScanAll X

+ Add rule Clear all

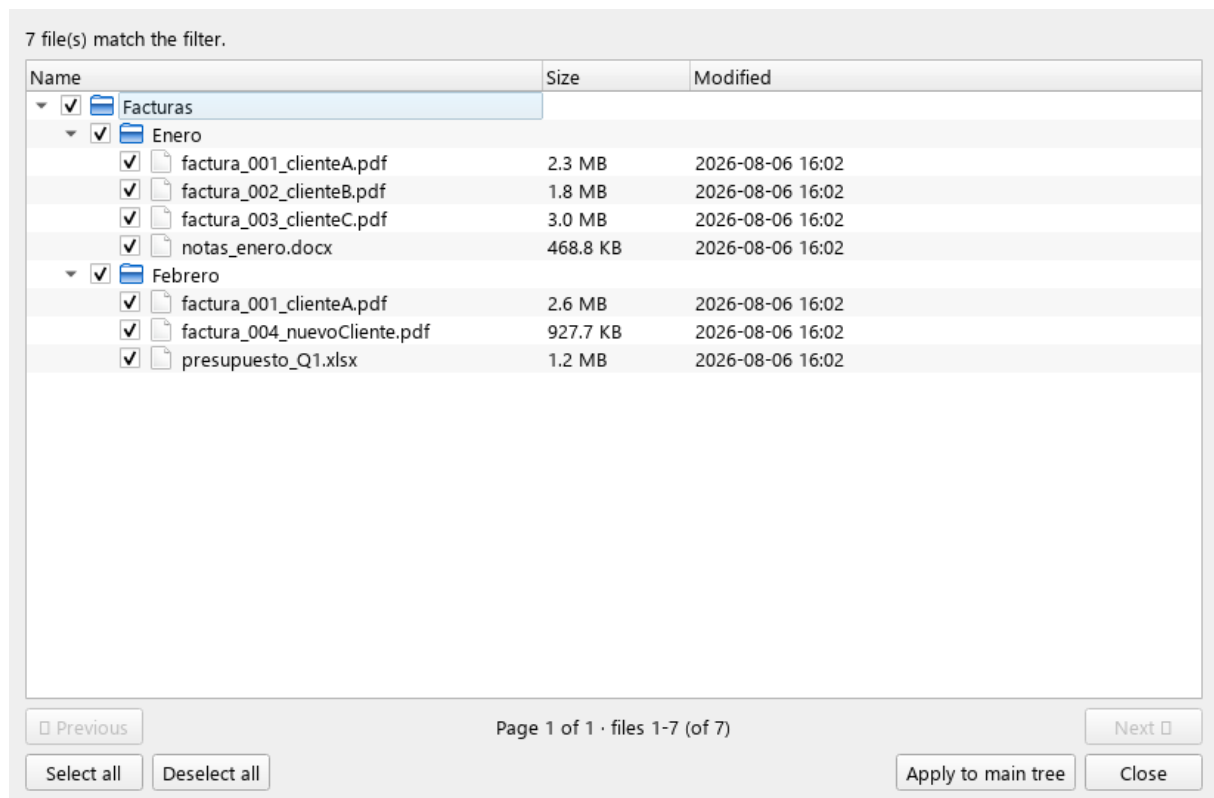

Press Preview to see matches

Preview Select Deselect Close

Filter dialog — build AND rules (e.g. name contains 'factura') to narrow the selection

****3. Preview and confirm****

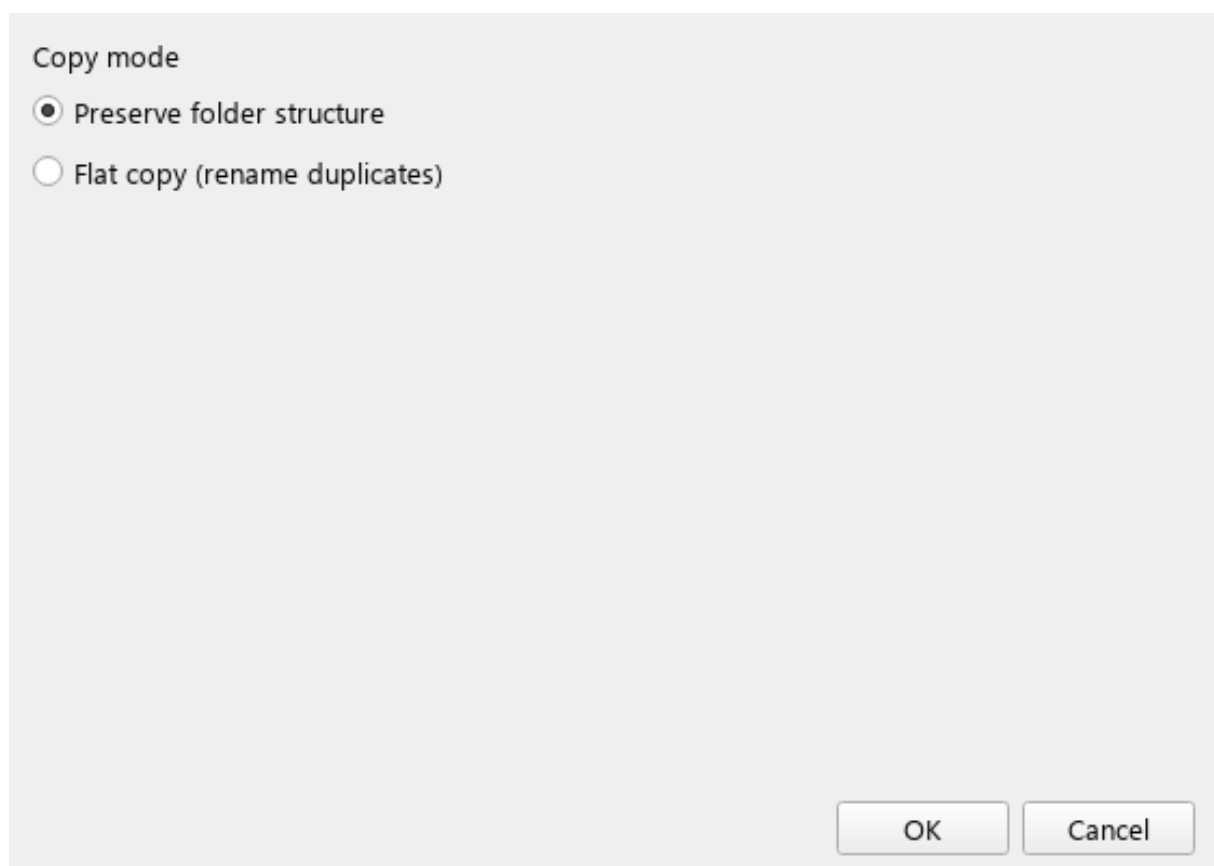

The Preview dialog shows every matched file. Uncheck anything you want to skip, then ****Apply to main tree****. If a destination already contains a file with the same name, the ***Conflicts*** dialog tells you whether to overwrite, skip, or auto-rename.

Preview dialog — every matched file listed before copying

****4. Pick destination(s) and copy****

Enter a destination (or several), choose collision handling, then ****Copy****. A progress dialog reports speed and a summary shows how many files/folders were copied, skipped, or conflicted.

Copy options — flat vs structured copy, duplicate handling

2 file(s) already exist in the destination:

	Source	Destination
1	C:...	C:\Users\Usuario\Desktop\Copia_Ordenada\Facturas\Enero\factura_001_clienteA.pdf
2	C:...	C:\Users\Usuario\Desktop\Copia_Ordenada\Diseno\logo_principal.png

Action for all conflicts:

☒ Overwrite

☐ Skip

☐ Rename automatically

OK Cancel

Conflict dialog — resolve files that already exist at the destination

****5. About Pro****

Pro (USD 10, lifetime, per device) removes the 100-file free limit, the 2-rule filter cap, and unlocks multi-destination copy. To activate, buy via the contact below and enter the PC code + received license key in ****Help → Activate Pro... ****.
